Dear sir/maam;

I am writing with regards to a recording that was altered. The altered version was used in my trial to imply a guilt factor and I lost a trial over the altered evidence.

I need an expert analysis of a CD disc of an interrogation recording. This examination needs an expert opinion that is supported by technical verifications and equipment results that will be accepted by federal courts. My case is in the Central District court, and involves many errors, which evolve around the altered results of this recording.

- A) can you electronically examine a CD for interruptions ?
- B) Do you have certified licencing ?
- C) Have you been accepted in the courts as an expert witness?
- D) Do you have the equipment to analyze audio on a CD ?
- E) Can your equipment stand critiques of the court ?
- F) This recording had been arased in areas, and answers altered from one  $\frac{1}{2}$ plce into the next, can your equipment detect these deficincies in the audio ?
- G) Some of the recording alterings occured outside near an airport and main highway, would those deficincies be detectable ?
- H) Can your equipment log these errors ?
- I) I was prosecuted for a crime I am innocent of and this recording was used to make that happen, can you be impartial ?

If these are things you can work with please contact me at the address above. If not thank you for your time.

Respectfully;  
John Henry Yab;lonsky
